

# CSS

- CSS also separates how a document looks from how a document is defined.
- In computer science term this idea is called “*Separation of Concern*” where we want to separate the “*content*” from “*presentation*”

# CSS solves ...

- The need to mash styling rules in the HTML like this:

```
4
5  <font size="12" color="red">
6    yuck
7  </font>
8
```
