What is the difference between class selector and id selector?

- ID selector must be unique within a html file.

- Class selector can apply to multiple locations marked by the class name in a html file.

What is the difference between class selector and id selector?

- ID selector must be unique within a html file.

- Class selector can apply to multiple locations marked by the class name in a html file.

Grouping selectors

- If you have elements with the same definitions, like this:

```css
h1 {
    text-align: center;
    color: red;
}

h2 {
    text-align: center;
    color: red;
}

p {
    text-align: center;
    color: red;
}
```
