- Your browser knows the names of 140 colours, but actually knows the colour values of more than 16 million colours!

- To tell the browser which colour to display, you just need to let it know how much red, green and blue to use.

- The amounts of red, green and blue are written as a number between 0 and 255.

Red Green Blue
↓ ↓ ↓
background: rgb(250,250,210);

- Add this code to the CSS for the body of the webpage, to display a light yellow background:

```
background: rgb(250,250,210);
```

```
body {
    color: tomato
    background: rgb(250,250,210)
}
```

Banana Milkshake

Ingredients:

Ingredients:

Ingredient	Amount
