- To change the font of your <h1> headings, add the following code between the curly brackets: **font-family: Impact;**

- You can also change the size of the heading: **font-size: 50pt;**

```
h1 {
  font-family: Impact;
  font-size: 50pt;
}
```

- Have you noticed that there's a big space between the <h1> heading and the stuff around it?

This is because there's a margin around the heading. A margin is the space between the element (in this case a heading) and the other stuff around it.
You can make the margin smaller with this code:

```
margin: 10px;
```
